CONGRATULATIONS, you have selected the most durable refinishing system available in the country. By following the guidelines listed below, you will be assured of many years of trouble-free service. Please DO NOT use this surface for 4 hours. Although the refinished surface can be put back into full use after this time, the surface will require 90 days to completely cure. Please observe the following:

1. During the refinishing process, masking tape was used, which will protect other surfaces during drying and curing. Remove this masking after the initial downtime, but within 72 hours after initial downtime. Care should be taken when removing the masking from wallpaper, or painted surfaces, so remove making slowly and carefully.

2. Clean the finish regularly with soap and sponge (this is called surface conditioning). PLEASE NOTE: All newly refinished surfaces will have some dust which will have settled into the new surface. Do not be alarmed: because the surface is still within its long term cure period, normal use and regular cleaning will remove all minor dust marks.

3. When removing the masking around the drain area, be careful not to break the seal around the drain shoe. Any glaze which is still left on the surface of the drain shoe can be carefully removed with a razor blade or knife. (Bathtub & sink only)

4. DO NOT lay soap bottles, or any other objects on the finished surface. (Bathtub only)

5. Be sure that your faucets are dry and not dripping after using the fixture, and be sure to towel dry the finish after each use. (Bathtubs & sink only)
LONG TERM CARE

1. DO NOT use any abrasive cleaners on or near the refinished surface. Your new finish is easily cleaned with any mild liquid cleaner, and should be cleaned after each use. In general, any cleaner approved for use on acrylic surfaces is OK to use.

2. DO NOT use any abrasive scrubbing pads, such as Scotch-Brite™, as this will scratch the surface.

3. DO NOT drop sharp or heavy objects on the finish, which may cause it to chip. Contact us immediately if this should occur. Failure to contact us in a timely manner can result in further damage and void the guarantee.

4. Faucets must be properly maintained by the owner and user, to protect the new surface. Leaky faucets will erode the new finish, causing it to crack and wear out prematurely, and voiding the guarantee (Bathtub & sinks only).

5. Destruction of the finish may occur through improper use of acid bearing compounds, such as drain openers or tile grout cleaners. All chemicals must be kept away from the finish. These chemicals include, but are not limited to, cosmetics, hair dyes, and perfumes, which may stain or otherwise mar the finish. Introduction of any of these chemicals onto the finish would be considered neglect and void the guarantee.

6. Do not use a rubber mat. Most mats will produce a reaction with the new surface when subjected to hot water. You can find a non-rubberized mat without suction cups at many stores, or we can provide you with one. (Bathtubs only)

7. Never place masking or any other type of tape on refinished surface.

REMEMBER, if you treat your new surface with respect, clean it regularly, and follow the above guidelines, your fixture will give you many years of trouble-free service.

THIS REFINISHING WORK IS GUARANTEED FOR A FULL XXXX YEARS AGAINST FADING, PEELING, OR CRAZING. THIS GUARANTEE DOES NOT APPLY TO CUSTOMER NEGLECT OF THE ABOVE LISTED ITEMS. SUCH REPAIRS WILL BE THE RESPONSIBILITY OF THE CUSTOMER AND NOT SURFACE DOCTOR.
